

Brian Hoang Ngoc Huy

Engineering Leader · Principal Software Engineer

Hanoi, Vietnam — open to remote-global · Huyhn310@gmail.com · +84 (0)337 031 089 · linkedin.com/in/brian-hoang-ngoc-huy

SUMMARY

Engineering leader with 16+ years building and shipping software, who grew from individual contributor to **Head of Engineering (CTO-level)** at a venture-backed startup. Built and led an engineering org of 11 across 3 teams, scaled a live game platform to **1M peak MAU** and **\$1.5M+ revenue**, and shipped **3 games and a creator platform from 0→1**. Hands-on player-coach who still architects and codes — including a **production, LLM-powered agentic engineering system** that cut bug-resolution time by 80%. Comfortable across the full stack, from modern Node.js / TypeScript / Python / cloud / web3 systems to enterprise .NET.

“Brian is a mix of strong engineering and leadership — the go-to person on the team for all engineering and product related matters. I trust Brian and would work with him again. He made a huge impact on our company.”

— Ngeow Jiawen, Director, We Are Day One

KEY ACHIEVEMENTS

- **Scaled to 1M peak monthly users** (50K DAU, ~10K concurrent) on a live web3 game platform — and kept it stable through a single-day surge of 600K+ bot-created accounts.
- **Drove \$1.5M+ lifetime revenue** (\$1M+ in 2025) across a portfolio of launched titles.
- **Built a production, LLM-powered agentic engineering system** (Python, RAG over a vector DB, Claude/GPT APIs) adopted by the whole team — autonomously triages tickets, investigates issues, proposes and opens fix PRs, reviews code, and generates business reports. Cut bug-resolution time ~80% (95% on investigation) and report turnaround ~70%.
- **Cut infrastructure cost 60%** (\$12K→\$5K/month) and **weekly downtime from ~4h to <1h** after taking ownership of a vendor-built game backend.
- **Grew engineering from 1 to 11** (4 full-time + 7 contractors) across 3 teams while the company pivoted from F&B SaaS to web3 gaming.

EXPERIENCE

DayOne → Uncharted

Singapore / Remote

Head of Engineering (CTO-level) — promoted from Principal Software Engineer

Jun 2021 – 2026

Joined as a principal engineer and grew to independently lead the entire engineering org, through the company's full pivot from a DayOne F&B-management product to **Uncharted**, a web3 gaming studio.

- **Launched the company's first iOS and Android apps**, then drove the pivot into blockchain/web3 — picking up the new domain rapidly and re-architecting around it.
- Built and led the engineering organization from **1 developer to 11** (4 FTE + 7 contractors) across **3 teams**; owned hiring, technical direction, and delivery.
- Architected and operated the live-game backend (Node.js, MongoDB, cloud infra, on-chain integration), scaling to **1M peak MAU / 50K DAU / ~10K CCU** at **~99% uptime**.
- Shipped **3 games and a creator platform 0→1**; lead title *Gangster Arena* reached **~80% per-session player return**.
- Took over the *Fishing Frenzy* backend from an external vendor and **cut infra cost 60% (\$12K→\$5K/mo)** and **weekly downtime ~4h→<1h** via code and infrastructure review.
- Designed and built a **production, LLM-powered agentic system** (Python, RAG / vector DB, Claude/GPT APIs, Node.js) used across the team for ticket triage, automated bug investigation, fix-PR generation, code review, and business reporting — **~80% faster bug resolution, ~70% faster reporting**.
- Hands-on throughout: defined architecture, ran code audits, reviewed code, and built critical/complex systems personally.

FPT Asia Pacific

Singapore

Technical Consultant / Team Lead

Jul 2017 – May 2021

- Led delivery teams building and maintaining enterprise .NET / SharePoint web applications for clients; owned solution design, architecture, and code review.

- Set IT standards and engineering practices; ran system integration testing, production support, and performance tuning.
- Built API integrations and scheduled/SSIS data pipelines (SFTP, encryption) with external systems.

PETRONAS ICT

Kuala Lumpur, Malaysia

Software Engineer / Team Lead

May 2015 – Jul 2017

- Built ASP.NET MVC / AngularJS applications; led service-request workflow and SLA effort-efficiency rules. Acted as team lead managing schedule and supporting the team on technical and business solutions.

Ciber (CMC)

Vietnam

SharePoint Consultant

Sep 2013 – Jul 2015

- Owned requirements, solution design, and development of SharePoint publishing sites; built 4 business workflows and custom search.

FPT Software

Vietnam

Software Developer

Dec 2009 – Sep 2013

- Built ASP.NET MVC / SharePoint applications (WCF services, custom webparts, timer jobs, event receivers); optimized SQL; performed code and performance reviews as team lead.

SKILLS

Leadership: Engineering management, hiring & team building, technical strategy, architecture, mentoring, cross-functional delivery (player-coach).

Backend: Node.js, TypeScript, Python, REST APIs, system design, scheduled jobs.

Mobile: iOS & Android app delivery (launched company's first mobile apps).

Data: MongoDB, SQL Server, vector databases, query / performance optimization.

Cloud & Infra: AWS, Docker, infrastructure cost optimization, reliability / uptime, CI/CD.

AI / Agentic: LLM orchestration & agentic workflows, RAG / vector DBs, prompt engineering, production AI integration (Claude/GPT APIs).

Web3: Blockchain / NFT integration, on-chain event processing, game-economy systems.

Enterprise (earlier): C# / .NET (Core, 4.x, WCF/WPF), SharePoint, ASP.NET MVC.

EDUCATION & CERTIFICATIONS

B.Eng, Software Engineering — FPT University (2007–2011). Full 4-year scholarship; Excellent Student award; Vietnam Student Mathematical Olympiad (2007).

Microsoft Certified Solution Developer (MCS D): Web Applications.

Microsoft Certified Technology Specialist (MCT S): Data Access (.NET 4).

Languages: Vietnamese (native) · English (professional working proficiency).
